

VAYRIN

Reducing emergency response time through integrated ambulance dispatch and hospital-verified blood logistics

Rudra Pratap Singh | rudrraaa@proton.me | +91 8240005142

Emergency Care Fails Due to Fragmentation

Slow Ambulance Discovery

Critical minutes lost during emergencies due to uncoordinated ambulance dispatch systems. Patients and families struggle to locate available ambulances quickly.

No Real-Time Blood Visibility

Hospitals operate blindly without live data on nearby blood availability, leading to delays in emergency transfusions and patient care.

Fragmented Coordination Costs Lives

Every minute matters—disjointed systems between ambulances, hospitals, and blood banks directly impact survival rates in emergencies.

A Unified Emergency-Health Logistics Platform

VAYRIN integrates critical emergency workflows into a single platform, connecting ambulances, hospitals, and licensed blood banks in real time.

Our solution eliminates coordination gaps, reduces response time, and provides hospitals with actionable visibility into blood logistics—all while ensuring compliance and reliability.

Working MVP – Pilot Ready

Production-Ready Web Platform (Pilot Rollout in Progress)

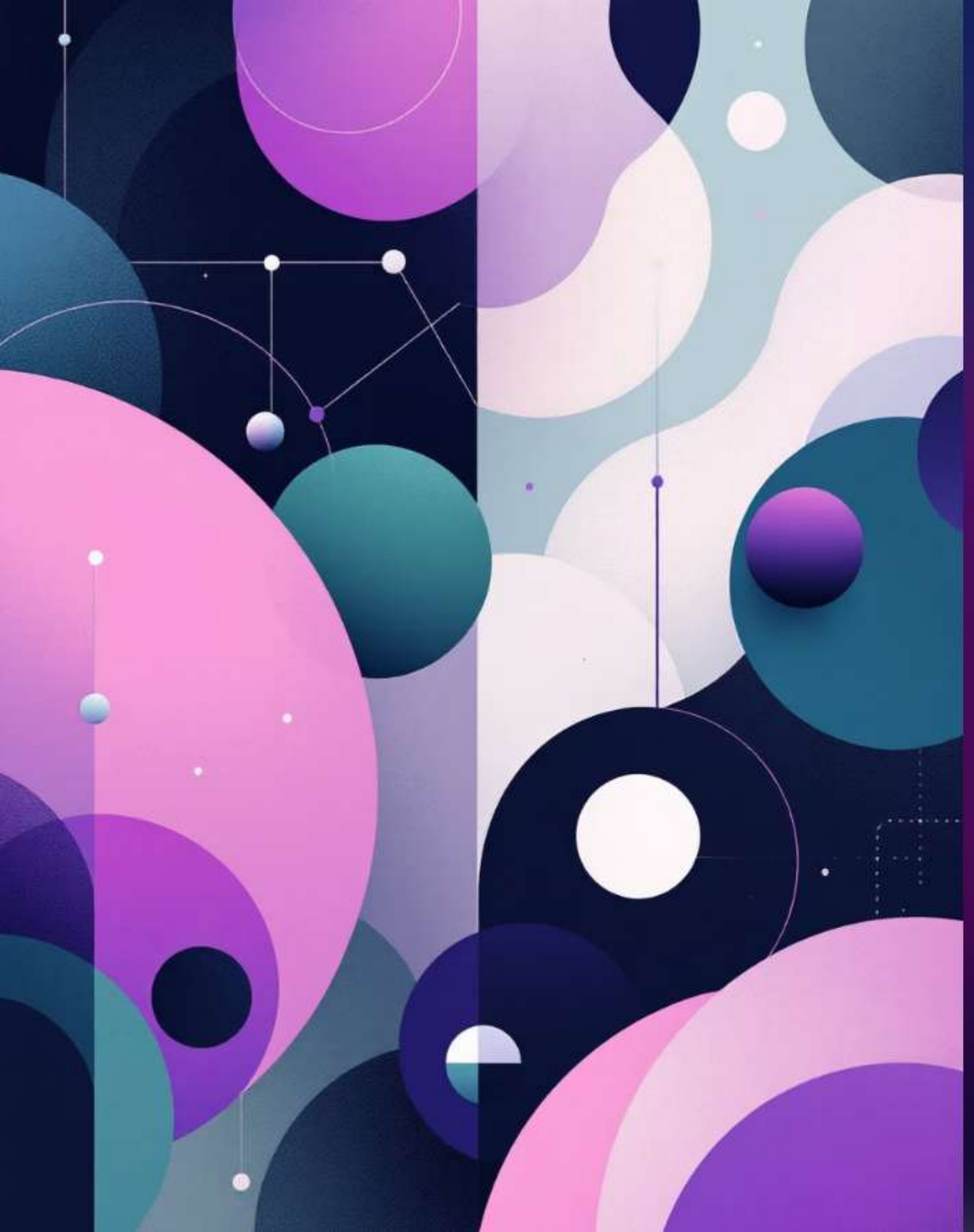

Our web-based platform is currently in production rollout phase, with core features fully developed and tested in a controlled development environment.

Hospital & Ambulance Workflow Integration

Designed in close consultation with hospital and ambulance partners to ensure seamless adoption, compliance, and operational efficiency from day one.

Scalable Architecture

Built on robust, scalable infrastructure to support rapid expansion across multiple cities and healthcare networks as demand grows.

Why This Problem Must Be Solved Now

Digital Infrastructure Adoption

Widespread smartphone penetration and digital infrastructure across India's healthcare sector have created the foundation for integrated emergency platforms.

Policy Push for Emergency Response

Government initiatives and regulatory focus on improving emergency medical services create momentum and support for innovative solutions.

Market Gap & First-Mover Advantage

No dominant player addresses this integrated workflow. Early entry positions VAYRIN to capture market share and set industry standards.

Large and Underserved Market

Emergency Medical Services

Growing demand for coordinated ambulance dispatch and emergency response systems across urban and rural India.

Hospital Operations Software

Hospitals seek integrated logistics platforms to streamline emergency workflows and improve patient outcomes.

Tier 2/3 City Expansion

Massive untapped opportunity in tier 2 and tier 3 cities where emergency infrastructure is still developing.

The emergency medical services ecosystem in India remains large, fragmented, and underserved, driven by urbanisation, healthcare digitisation, and policy reforms focused on emergency response infrastructure.

B2B-First, Compliance-Aligned Model

Hospital Subscriptions

Recurring subscription fees from hospitals for platform access, blood coordination, and emergency workflow integration.

Ambulance Platform Fees

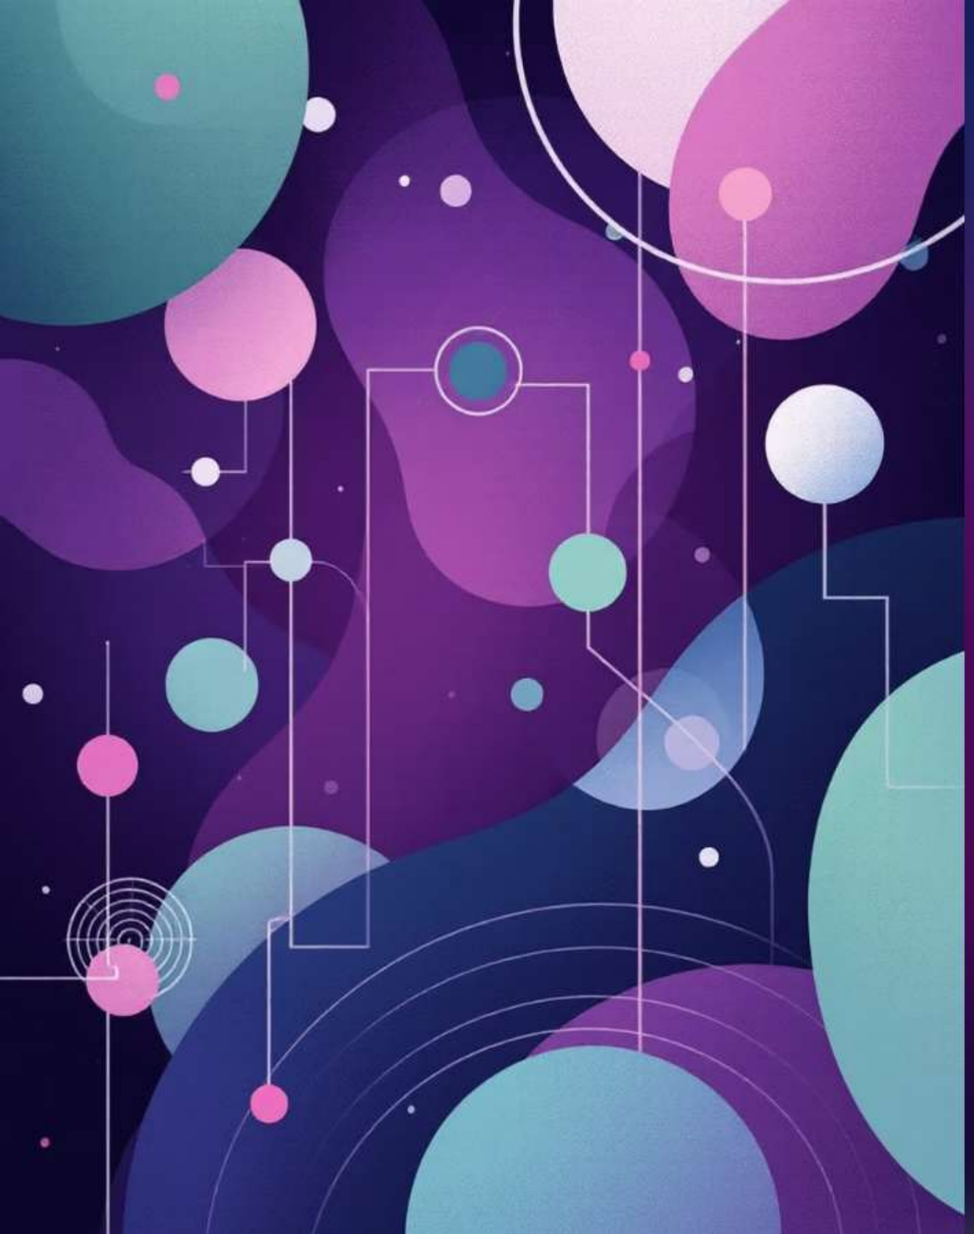

Access fees from ambulance operators for real-time dispatch, visibility, and seamless integration with hospital networks.

Logistics Service Fees

Coordination and service fees for facilitating emergency logistics workflows between stakeholders.

Compliance Note: Our business model operates within regulatory frameworks and does not involve direct blood sales.

Fragmented Solutions, No Integration

Ambulance Aggregators

Focus exclusively on ambulance booking without hospital or blood logistics integration. Limited to single-use case.

Hospital Management Systems

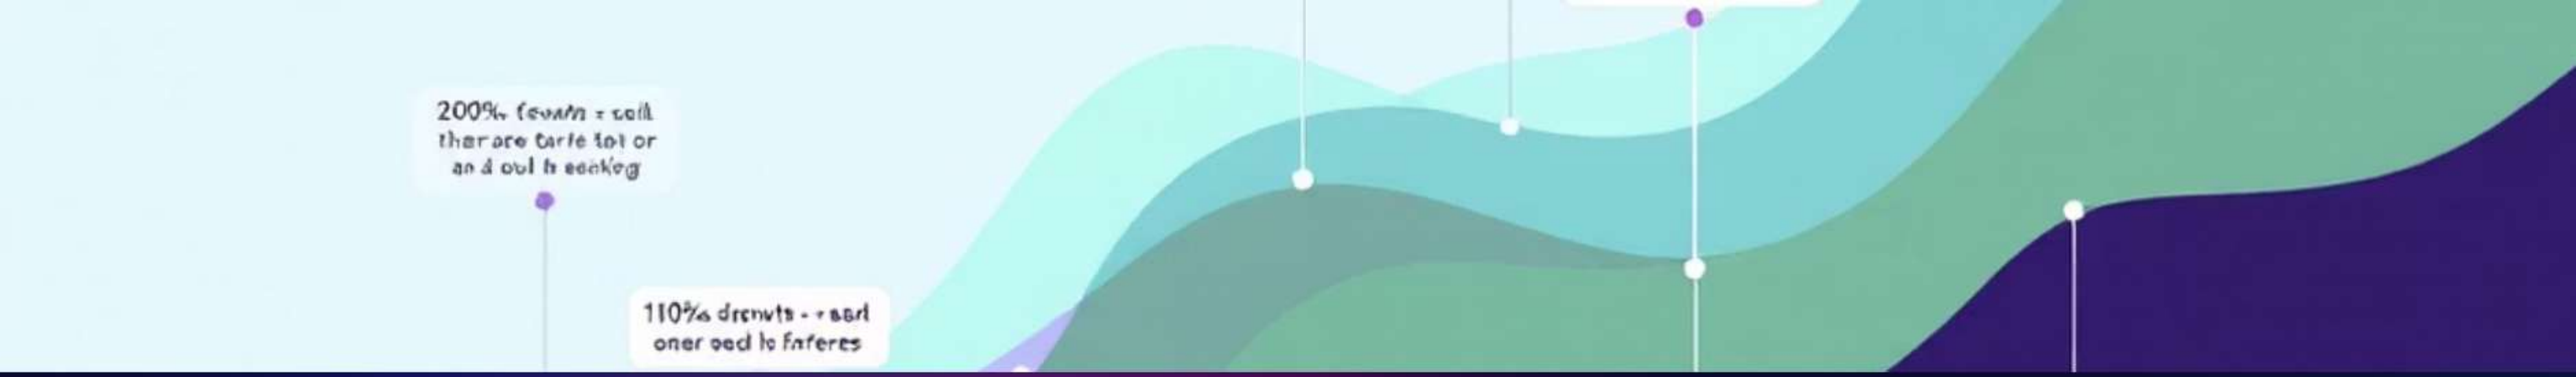

Internal operations tools with no external coordination capabilities for ambulances or blood banks.

Blood Bank Directories

Static, non-integrated listings with no real-time data or hospital workflow connection.

Our Advantage: End-to-End Integrated Emergency Workflow

VAYRIN is the only platform connecting ambulances, hospitals, and blood banks in real time—eliminating fragmentation and saving lives.

Next 12 Months

Q1–Q2: Pilot Deployment

Launch pilot program with 1–2 partner hospitals to validate workflows, gather feedback, and refine platform features.

1

Q2–Q3: Partner Onboarding

Onboard ambulance operators and additional blood banks, building network effects and operational scale.

2

Q3: Compliance Validation

Complete regulatory compliance validation, ensuring all workflows meet healthcare and data security standards.

3

Q4: City-Level Rollout

Expand to full city-level deployment, establishing VAYRIN as the integrated emergency logistics platform of choice.

4

Team & Fundraise

Founder-led execution with full ownership across product, technology, and early partnerships

Rudra Pratap Singh brings deep focus on technology development, product execution, and stakeholder engagement in the HealthTech space.

Strategic Hires Planned

Post-funding, we will bring on board key talent in healthcare operations, compliance, and business development to accelerate growth.

The Ask

This round provides ~12 months of execution runway focused on Kolkata pilot validation. Raising **₹50–75 lakh pre-seed** to support pilot deployments, compliance validation, hospital onboarding, and initial market expansion.
